

Jamesbury™ DIN flanged ball valves

Full bore: DN 15 – 150

PN 16 – PN 40

Series 9000 (916D, 940D)

The Jamesbury polymeric-seated flanged ball valves feature a flexible-lip seat design that provides positive bi-directional shut-off for a variety of applications in industries ranging from chemical and petrochemical to refining, pulp and paper, and power.

Polymeric-seated flanged ball valves are available in sizes (DN 15 – 150) in both full-bore and standardbore designs that fully conform to ISO 17292 requirements.

A choice of body, trim, and seat materials is available to suit an extensive range of applications.

As an option, valves can be prepared for special services, such as chlorine, oxygen, high-vacuum, hydrogen peroxide or NACE.

Fire-Tite™ valves

Standard body and trim materials for Fire-Tite valves are carbon steel with 316 stainless steel trim and all 316 stainless steel. Seat material options include Xtreme™ (X) for applications involving chemicals, petrochemicals, acids, caustics, and steam.

CE marked

All valves larger than DN25 are CE marked and documented to meet the European Pressure Equipment Directive (PED) 97/23/EC. CE marked products also meet the requirements of BS 5351, including static grounding.

Features and benefits

- Xtreme seat provides longer life, expanded performance boundaries, and greater value.
- Polymeric flexible lip-seat design offers tight shut-off in either direction and extended cycle life with minimum maintenance.
- Fire-Tite version with non-metallic seats meets API 607 and ISO 10497 requirements.
- Superior control characteristics, coupled with tight shut-off capabilities, make these valves ideal for a variety of on-off and control applications.

- API 608 compliance to serve refineries and related chemical and petrochemical industries.
- NACE MR0103 compliance available.
- Meets 21 standard and 12 optional industry standards and specifications.
- Face to face dimensions according to ISO 5752.

New features and benefits for DN 15 through DN150 Series 9000

- New patented stem seal system is live loaded and engineered to assure long sealing life on sizes up to DN40.
- ISO 5211 Bonnet for global conformity on sizes up to DN40.
- New stainless steel linkage for VPVL, V-Series and ADC-Series actuators has a guided coupling to align topworks during assembly and eliminate side load stress on stem seals for long life, clean environment and reduced maintenance.

Single-source responsibility

- Valves, actuators and accessories may be purchased completely mounted from one source.

Specifications

Flow data

The table at right provides flow coefficients for Jamesbury valves covered in this bulletin. Kv values represent the flow of water at 16°C through the valve in cubic meters per hour at a pressure drop of 1 kg/cm². To convert Kv to Cv, divide by 0.8569.

Valve body ratings

These are the maximum working pressure ratings of the valve body only. The seat ratings, shown on the next page, determine the practical pressure limitations according to actual service conditions. Test pressures are recommended pressures for hydrostatic test with ball half open.

Valve Size	Kv
DN	Full Bore
15	8
20	43
25	86
40	230
50	420
80	990
100	1885
150	4370

Maximum Working Pressure, bar				
Temp °C	PN16		PN40	
	Carbon steel	316 Stainless steel	Carbon steel	316 Stainless steel
-29 a 38	16	14,7	40	36,8
100	16	12,5	40	31,3
150	15,6	11,4	39,1	28,5
200	15,1	10,6	37,9	26,4
250	14,4	9,8	36	24,7
Test pressure	24	23	60	56

Valve seat ratings

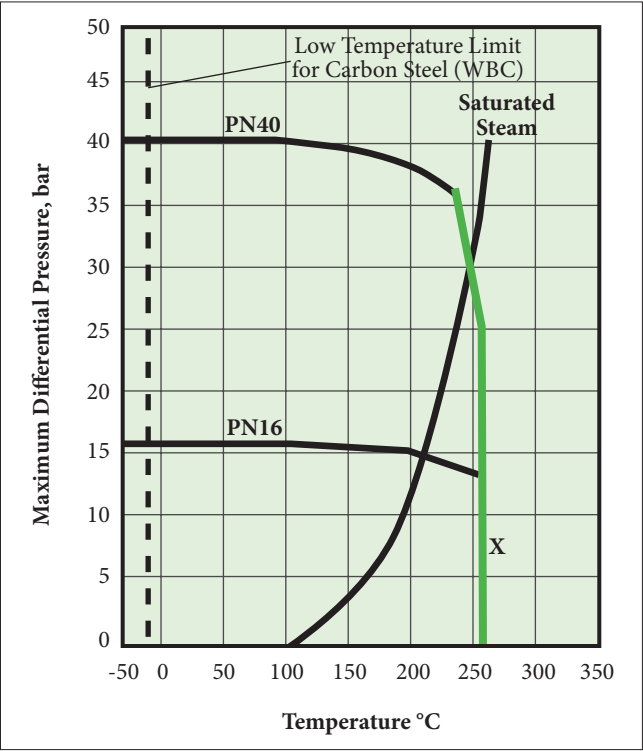

Seat ratings, indicated by solid lines in the charts on the next page, are based on differential pressure with the valve ball in the fully closed position and refer to seats only. The dotted lines indicate maximum working pressures for WCB carbon steel valve bodies. (Maximum working pressures of other body materials are shown in the tables above.) The combination of dotted and solid lines indicates the maximum valve rating at specific pressure and temperature conditions. Valves with Xtreme seats can be used in service to -51°C provided that the valve body material is suitable for such a temperature. Carbon steel valves are rated to -29°C.

On saturated steam service, stainless steel trim is recommended at all pressures and is required above 14 bar. See Bulletin B150-1. For more application information on seat materials, refer to Bulletin T140-1.

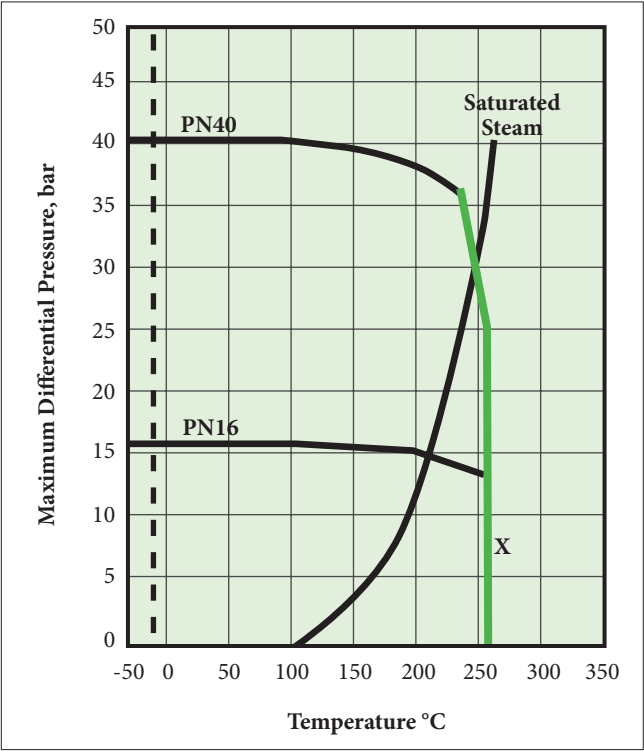

Xtreme performance and value

Xtreme seats provide longer life, expanded performance boundaries, and the greatest possible value. Xtreme is a unique material that resulted from a technological breakthrough in our polymer research lab. The material is a fluoropolymer-based blend proprietary to Jamesbury that provides superior quarter-turn performance.

Actuators

Neles offers a full line of integrally designed actuators for automated systems or for easier control of inaccessible or remote valves. Pneumatic actuators that include doubleacting and spring-return piston, vane, and rack and pinion units, spring-diaphragm types, and electric actuators are available for all valves. Electric actuators are available with both watertight and hazardous location enclosures. For further information on actuators for Series 9000 valves, see the following:

Type

Spring-Diaphragm Actuators
VPVL Mod D Actuators
V Series electric actuators
ADC Series electric actuators

Accessories

Locking devices

When safety measures are necessary, a reliable locking plate is available to allow the valve to be padlocked in either the open or closed position. Proper figure numbers are shown in the Accessory Table below.

Bonnet/stem extensions SE-096, 097 & 098

100 mm bonnet/stem extensions are available for applications that require insulated pipe, particularly useful for automated products, extensions can also be used to prevent interference between actuators and companion pipelines and equipment. They are ideal as extension that require locking lever or locking oval handle capability. Stainless steel construction offers the option of using the extension to complement the carbon steel stem extension (SE-093, 094 & 095) offering.

Stem extensions SE-093, 094 & 095

A standard 100 mm stem extension is offered for Series 9000 valves DN 15 – 40 for improved accessibility, particularly when used in insulated pipelines. Stem extension kits can be ordered factory-mounted or shipped separately for field mounting.

Round handles

Series 9000 ball valves have optional round handles available. To order handles separately, specify the part number shown in the accessories table below.

Oval handles with slide-lock

Optional oval handle saves space and may be padlocked to retain the valve in the open or closed position.

Cavity fillers

Cavity fillers are available in 9000 series full bore valves. The fillers are TFE and used for sanitary applications and in processes where cross contamination is a concern. Food processing, pharmaceuticals, cosmetics, paints, solvents, finishes and dyes are typical applications where fillers are employed.

Valve torque data

Use these torque charts as a guide for actuator selection. Additional requirements may be imposed by media characteristics, trim, and frequency of valve operation. For clean lubricating fluid service, required torque for Xtreme (X) seated valves only may be reduced 20% when the valve is equipped with corrosion resistant trim. For difficult services such as slurries and semi-solids, and for oxygen, increase values by 50%. If in doubt, err on the side of safety by using a larger actuator than would normally be selected.

Valves requiring increased stem seal performance should use E-Pak™. Refer to bulletin B115-4. E-Pak valves require an increase in operating torque.

Torque output values and actuator selection tables for the different types of actuators are contained in the bulletins listed below.
